Dear All:

We want inform you about a unique and proven technology that can help you generate a very significant amount of new revenue from your existing client base. **This is a great opportunity for your company, our company, and your customers.**

DUO-REGEN® Technologies, LLC is a Florida-based company specializing in a new cutting-edge proprietary technology designed to regenerate and restore life to aging or malfunctioning batteries. Our proprietary electrochemical process (The **DUO-REGEN®** process) will also extend the life and efficiency of new batteries. While we possess the ability to treat almost all kinds of batteries, we are of course referring to **forklift batteries** for the purpose of this letter.

As a company specializing in forklift repair, I am sure you are well aware of the problems and costs that your customers incur due to poor forklift battery performance. This is a problem that you are probably referring to a battery company or battery supplier. This is where you can now offer a new and proven service to your clients and thus significantly improve your sales and profits. By becoming a provider of this battery regeneration service, you will also be able to offer your clients something that your competition cannot and thus enhance your ability to capture market share and increase profits.

The benefits to your customers are significant and easy to understand. They will be able to restore aging batteries to their original capacity and in some cases beyond their original capacity for roughly less than 1/3 the price of replacement. This price includes a rewarding profit margin for you. The client will also experience greater efficiency in the form of longer discharge times (productivity) and shorter charging times (energy savings.)

DUO-REGEN® Technologies will benefit from an association with your company as we will have a customer that is familiar with forklift problems, has an existing client base of end users and the knowledge of who the decision makers are.

It is our desire to license one Forklift Repair Company in a specific area of each country and train them to use our process. We will be contacting all forklift repair companies with this opportunity and we will do business with the most qualified operators. We hope that will be your company. Please visit our web site and read about our technology. Visit the section labeled "Testimonials" and you will realize that this opportunity is genuine. You can also download and read retail and industrial brochures. Please call us with any questions you may have. We look forward to talking with you.

Respectfully,

Gil Drissi
