

YOU CAN EXTEND LIFE & BOOST POWER of Old & New Batteries!

Including Older, Worn-out Batteries That Last Only 2 To 3 Hours Instead Of 6 To 7 Hours.

TRIPLE YOUR LIFESPAN & REDUCE MAINTENANCE COSTS!

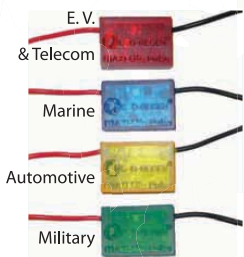

THE PROBLEM:

Batteries fail because the plates normally get covered with "sulfates" that gradually reduce a battery's ability to receive and deliver power.

THE DUO-REGEN® SOLUTION:

DUO-REGEN ResureX Battery Additive dissolves the sulfates back into the battery acid. This cleans the plates, improves the battery's ability to provide heavy currents for starting, and extends the battery's life.

DUO-REGEN MAXI-Life Pulse delivers an electronically controlled pulse to the battery, re-energizes crystallized sulfates deposited on the plates, and removes large deposits of crystallized lead sulfate. The battery remains with clean plates and has strong electrolyte to receive charging current and deliver discharge current.

MAXI-Life Pulse
